Objective

I'm an algorithm and data processing engineer with experience in signal processing and software development. My passion lies in transforming mathematical concepts into practical code and real-time solutions, from optimization methods to intuitive tools that make complex systems more accessible.

Industry Experience

Sep. 21
Present

Senior Algorithm and Data Processing Developer, Scantinel Photonics GmbH, Ulm Germany

- Developed the novel algorithm [VQRV](#), solving Doppler ambiguity in FMCW LiDAR and improving velocity estimation for fast-moving nearby vehicles.
- Designed novel filters ([MLN](#), [DCL](#)) on 3D noisy Point Cloud Data for real time visualization.
- Implemented several raw-time domain filtering (Hann, Chebyshev, Planck-Taper) and peak detection (CA-CFAR, OS-CFAR, RANSAC, M-estimator) algorithms supported by [statistical analysis](#).
- Contributed to real-time communication software between Scan Controller, ARM processor, and host PC, working with UDP/TCP protocols and PTP synchronization, including troubleshooting to improve data transmission stability.
- Designed and implemented the system software architecture using MVC in PyQt, building real-time and offline visualization tools.

Jan. 19
Jul. 21

Software Developer, Navimatix GmbH, Jena Germany

- Implemented an image processing pipeline for [bacteria counting](#) on fluorescence microscopy images (E. coli, P. aeruginosa, M. tuberculosis, S. aureus), integrating ImageJ/FIJI APIs in a JavaFX GUI. The workflow applied Median filtering, ISODATA segmentation, Opening filters, and 2D/3D object counting for semi-automated analysis.
- Implemented several user interface applications in Java (JavaFX), C# (.Net Framework WPF) and Delphi.

Sep. 16
Feb. 17

Working Student, Siemens, Network R&D, Munich Germany

- Implemented a simulation of the IEEE Time-Sensitive Networking (TSN) Scheduler for Industry 4.0 applications, modeling deterministic network protocol behavior for synchronized real-time traffic.
- Developed a C++ parser to integrate SDN Controller outputs into the network simulator, enabling accurate analysis of transmission delays and end-to-end latency across the topology.

Jul. 11
Aug. 14

Customer Technical Network Specialist, Orange Business Services, Cairo Egypt

- Diagnosed and resolved WAN network faults (proactive and reactive), working extensively with IPv4/IPv6, MPLS, and routing protocols including OSPF, RIP, EIGRP, and BGP, ensuring SLA compliance and service continuity.
- Shift Leader for a group of 5 to 10 daily, managing the workflow through the team.

Personal Projects

- Implemented an internal perception pipeline (filtering, segmentation, object detection, tracking).
[Sources](#): Ransac, knn, kd-tree, JPDA Tracking.
- Implemented a diffusion-based image reconstruction concept with [ControlNet](#) conditioning, VAE compression, and transformer cross-attention with edge maps and prompt text to apply image denoising.
- Implemented PV-RCNN in PyTorch using [OpenPCDet](#), building a Docker-based development environment.

Education

Sep. 14
Feb. 18

M.Sc. in Communications and Signal Processing, Technische Universität Ilmenau, Germany

- Major Subjects: Mobile Communications Engineering, Adaptive Array and Signal Processing, Digital Signal Processing (audio and Image) and Communication Networks.
- Average grade: 2.2/1.0
- Master Thesis 'Positivity Decomposition Algorithms on EEG/MEG Data': Implemented non-negativity constraints on tensor-based blind source separation algorithm
Sources: [Publication](#), [Thesis Publication \(not completed\)](#)
- Advanced Research Project 'Decomposition of a Low Rank Tensor with Missing Entries': Developed a missing imputation tensor algorithm to make it adaptive as per step size and rank estimation.
[Sources](#)

Sep. 05
Feb. 10

B.Sc. in Electronics and Communication, Arab Academy for Science and Technology, Alexandria

- Major Subjects: Wireless and Mobile Communications, Analog and Digital Signal Processing, Communication Networks, Electromagnetic and Antenna theories.
- Average grade: 1.3/1.0 – Excellent with degree of honor besides graduating top of my class.

Certificates and Online Courses

- 22 May 2019: [OOP in Java — Udemy](#)
- 24 Aug. 2020: [Machine Learning — Coursera](#)
- 14 May 2021: [Structuring ML Projects — Coursera](#)
- 30 Apr. 2021: [Neural Networks and Deep Learning — Coursera](#)
- 04 Jun. 2021: [Convolutional Neural Networks — Coursera](#)
- 07 May 2021: [Improving DNN Hyperparameter Tuning, Regularization and Optimization — Coursera](#)
- 24 Aug. 2021: [Sensor Fusion — Udacity \(Mercedes Benz\)](#)
- 02 Sep. 2025: [Introduction to Deep Learning & Neural Networks with Keras — Coursera \(IBM\)](#)
